Air Force CALS Test Bed

Notification of Test Results

07 March 1994

This notice documents the results of an Air Force CALS Test Bed (AFCTB) Quick Short Test Report (QSTR) evaluation of data submitted by:

Sikorsky Aircraft

Identified as follows:

Title:	Technical Publication Transfer
Program:	The Army Blackhawk Program
Program Office:	
Contract No.:	DAAJ09-92-C-0004,P00017
QSTR No.:	AFCTB-ID 94-009

Received on the following media: **9-Track Tape**

The results of the AFCTB Quick Short Test Report evaluation are as follows:

MIL-STD-1840A Media Format:	Pass
MIL-D-28000A IGES:	N/A
MIL-M-28001A SGML:	Fail
MIL-R-28002A Raster:	N/A
MIL-D-28003 CGM:	Fail

Formal results with associated disclaimer are documented and available from the AFCTB.

1. Introduction

1.1 Background

The Department of Defense (DoD) Air Force Continuous Acquisition and Life-cycle Support (CALS) Test Network (AFCTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD-1840A, and its companion suite of military specifications. The AFCTN is a DoD sponsored confederation of voluntary participants from industry and government managed by the Electronic Systems Center (ESC).

The primary objective of the AFCTN is to evaluate the effectiveness of the CALS standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards; formal and informal.

Formal tests are large and comprehensive, which follow a written test plan, require specific authorization from the DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the AFCTN technical staff, to broaden the testing base. They include representative samples of the many systems and applications used by AFCTN participants. They also allow the AFCTN staff to gain feedback from many industry and government interpretations of the standards, to increase the base of participation in the CALS initiative, and respond to the many requests for help that come from participants. Participants take part voluntarily, benefit by receiving an evaluation of their latest implementation (interpretation) of the standards, interact with the AFCTN technical staff, gain experience using the standards, and develop increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.

1.2 Purpose

The purpose of the informal test, reported in this QSTR, was to analyze Sikorsky Aircraft's interpretation and use of the CALS standards in transferring technical publication data. Sikorsky used its CALS Technical Data Interchange System to produce data, in accordance with the standards, and delivered it to the AFCTN technical staff on a 9-track magnetic tape.

2. Test Parameters

Test Plan: AFCTB 94-009

MIL-D-28003

3. 1840A Analysis

3.1 External Packaging

The tape arrived at the Air Force CALS Test Bed (AFCTB) enclosed in a box in accordance with ASTM D 3951. The exterior of the box was marked with a magnetic tape warning label, as required by MIL-STD-1840A, para. 5.3.1.3.

The tape was enclosed in barrier sheet material as required by MIL-STD-1840A, para. 5.3.1.2. Inspection of the tape reel showed the label indicating the recording density, as required by MIL-STD-1840A, para. 5.3.1. Enclosed in the box was a packing list showing all files recorded on the tape.

External packaging meets the requirements defined in CALS MIL-STD-1840A.

3.2 Transmission Envelope

The 9-track tape received by the AFCTB contained MIL-STD-1840A files. The files were named per the standard conventions.

3.2.1 Tape Formats

The tape was run through the AFCTN *Tapetool* v1.2.10 utility. No errors were encountered while evaluating the contents of the tape labels.

The tape was read using the XSoft *CAPS read1840A* utility without a reported error.

The tape format meets the requirements defined in CALS MIL-STD-1840A and ANSI 3.27.

3.2.2 Declaration and Header Fields

No errors were found in the Document Declaration file and data file headers. The structure of these files meet the requirements defined in CALS MIL-STD-1840A.

4. IGES Analysis

No Initial Graphics Exchange Specification (IGES) files were included in this evaluation.

5. SGML Analysis

The tape submitted by Sikorsky contained DTD and text files. The AFCTB has several parser available for evaluating submitted DTD and text files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. These products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings unless specified in the report. Changes to DTD or text files required by each system are not documented in the report.

The text and DTD files were tested using the Exoterica *XGMLNormalizer* parser. The provided DTD parsed without any reported errors or warnings. Using the provided DTD, the text file had many reported errors. The errors were similar, in that they all pointed to missing external references. The line shown below was added to correct this condition. A check of the DTD showed that the external reference entities were not called. These statements were added to the DTD, and the text file parsed without any reported errors or warnings.

```
%ISOnum; %ISOpub;
```

The text and DTD files were evaluated using another parser, available within the AFCTB. The corrected DTD was used during the parsing operation. This parser reported several

graphic entities were reused, along with other errors. Because of the errors the DTD did not compile and, therefore, the text file could not be evaluated. The parser log is included in Appendix B, Section 10.1 to this report.

The text and DTD files were evaluated using the Exoterica *Validator ex1* parser. This operation generated multiple graphic redefinition warnings as well as other type warnings. The parser log is included in Appendix B, Section 10.2 to this report.

The text and corrected DTD files were evaluated using McAfee & McAdam's *Sema Mark-it* parser. This program reported no errors.

The text and corrected DTD files were evaluated using the Public Domain *sgmls* parser. Only one error, which is shown below, was reported. The parser log is included in Appendix B, Section 10.3 to this report.

```
<!ELEMENT (illlist | tablist) - - EMPTY >
```

The text and corrected DTD files were imported into Arbor-Text's *Adept* software. The DTD parsed without error.

Because of the error in the DTD, the provided files do not meet the CALS MIL-M-28001A specification.

6. Raster Analysis

No Raster files were included in this evaluation.

7. CGM Analysis

The tape contained 41 CGM files. The files were evaluated using ATC's *MetaCheck* with CALS options. The utility reported that all files failed to meet the specification defined in MIL-D-28003. The reported error is related to the use of non-valid fonts.

===== CALS CGM Profile (MIL-D-28003) Report =====

Error 6509: Element Class/ID: 1/13 Offset: 84 octets Element No. 9
Invalid list parameters; each of the Font Names in the FONT LIST element must be among the Font Names allowed by the Profile.

All CGM files were evaluated using the beta AFCTN *validcgm* utility. This utility also reported errors in the fonts. MIL-D-28003, para. 3.2.5 permits 16 fonts in the Hershey group.

MILSPEC 28003 error: illegal font name HELVETICA
MILSPEC 28003 error: illegal font name HELEVITICA_BOLD
MILSPEC 28003 error: illegal font name FRANKLINGOTHIC-HEAVY
(9, 84) (1, 13, 48) Font List
 "HELVETICA"
 "HELEVITICA_BOLD"
 "FRANKLINGOTHIC-HEAVY"

The AFCTB has several tools for viewing CGM files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. Many of these products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings.

Because of the number of submitted files, a sample was selected for the detailed evaluation discussed below. Four sets of hard copies (D001C004, C009, C018, and C031) are provided along with the parser logs for two files (D001C004 and D001C009). An additional four files, D001C012, C022,

C028, and C045, were also reviewed in detail. These files are not discussed but received the same level of review as those listed above.

All files were read into Carberry's *CADLeaf* software and displayed without a reported problem. No errors were noted in file C004. File C009 had text overrunning graphics. The text overflow problem was also noted in file C018.

According to R.Bryan DiAntonio of Carberry, "...with the 'Proportional Font' option turned on, text overrunning was fixed."

The sample files were read into IDA's *CALSVIEW* software and displayed without a reported problem. In checking the displayed and hard copy images, some errors were noted. The two lines of text in file C004 and C009 appear to touch. The text overflows the defined area in file C018. In file C031, the background color of the circles located within the square shapes was black, making the numbers located within the circles unreadable.

The selected files were viewed and printed using another software available within the AFCTB. No errors were reported during the import process. All files displayed a set of lines from one point to various entities. The text overflow problem in file C018 was noted.

The selected files were imported into the Micrografx *Designer* with all files reporting four errors. The sample files displayed entity errors. Lines, arcs, and circles were missing or disjointed. However, the text overflow problem, noted above in file C018, was not present.

According to Michael Harrison of Micrografx, "Micrografx is aware of the problems associated with reading these files and is working on a solution to be implemented in a future release of our product."

The sample files were imported into Lotus' *Freelance* and displayed without a reported error. When displayed, the image had to be reduced in size to fit the defined page. No problems were noted in file C004. File C009 had some text run together. File C018 had text overflow along with overwriting of graphics entities. In file C031, the background color of the circles located within the square shapes was

black, making the numbers located within the circles unreadable.

The sample files were imported into SPC's *Harvard Graphics* v3.05 without a reported error. When displayed and printed entity errors and misplaced arcs were noted. The text overflow problem, in file C018, was also present. In file C031, the background color of the circles located within the square shapes was black, making the numbers located within the circles unreadable.

The sample files were read into Inset Systems' *HiJaak Pro* without a reported error. All of the graphics images appeared to be complete. Some overlap of leader lines and text was noted. The text overflow problem was present in file C018. In file C031, the background color of the circles located within the square shapes was black, making the numbers located within the circles unreadable.

The sample files were imported directly into Island Graphics' *IslandDraw* v4.0 without a reported error. When first displayed on the screen, no text was present. By re-selecting the text as black, it was displayed. Entity errors, misplaced arcs, and disjointed line segments were noted in files C004, C009, and C018. However, the text in file C018 was correctly placed within the text block. In file C031, the background color of the circles located within the square shapes was black, making the numbers located within the circles unreadable.

The sample files were imported into Corel's *Ventura Publisher* without a reported error. When displayed and printed, entity errors, misplaced arcs, and disjointed lines were noted in all files. The text in file C018 was placed correctly. The square and circles in file C031 were also displayed correctly.

The CGM files were reported in error by both ATC's *MetaCheck* and AFCTN's *validcgm*. The problem relates to use of nonapproved fonts. The files were imported into several applications in the AFCTB, and they all reported problems with the files. The most noted error was in text overflow in file C018. Some applications had problems with incomplete entity structure. Because of the font problem, the files do not meet the CALS MIL-D-28003 specification.

8. Conclusions and Recommendations

The physical structure, Document Declaration file, and data file headers of the tape from Sikorsky Aircraft was correct. This portion of the tape meets the CALS MIL-STD-1840A requirements.

The DTD contained errors which had to be corrected before any additional evaluation could be completed. The SGML files do not meet the CALS MIL-M-28001A specification, due to the errors in the DTD.

The CGM files do not meet the CALS MIL-D-28003 specification, due to the non-supported text fonts.

The tape does not meet the CALS MIL-STD-1840A requirements, because of errors in the DTD and CGM files.

10. Appendix B - Detailed SGML Analysis

10.1 Parser Log

SGML Document Type Definition Parser
An SGML System Conforming to
International Standard ISO 8879
Standard Generalized Markup Language

Log file: '9409.LOG'
SDO File: 'ctnddecl.sdo'
Namecase General is yes.
Namecase Entity is no.
Parsing DTD file: '9409.dtd'
Parsing DOCTYPE DMWR

DTD0143: Attempt to declare general entity name 'aa3150'
more than once denied.
In declaration: '<!ENTITY'.
In declaration: '<!['.
In declaration: '<!DOCTYPE'.
in entity 'math'
in line 106 in file '9409.dtd'

<<<<< PART OF LOG FILE REMOVED HERE >>>>>

DTD0137: Incorrect token 'TEMP'. Parser Ignoring Input Up To Next MDO.
In declaration: '<!['.
In declaration: '<!['.
In declaration: '<!DOCTYPE'.
in entity 'text'
in line 652 in file '9409.dtd'

DTD0221: An unknown keyword was used in a marked section declaration. Only
TEMP, IGNORE, and INCLUDE are allowed in a Document Type Definition.
CDATA and RCDATA are allowed in a document instance.
In declaration: '<!['.
In declaration: '<!['.
In declaration: '<!DOCTYPE'.
in entity 'text'
in line 656 in file '9409.dtd'

DTD0095: Start tag for element 'ILLLIST' cannot be omitted if the
element had declared content (CDATA, RCDATA, EMPTY).

DTD0095: Start tag for element 'TABLIST' cannot be omitted if the
element had declared content (CDATA, RCDATA, EMPTY).

DTD0096: The generic ID DOCTYPE has not been used in any content
model, inclusion, or as a doctype element.

DTD0096: The generic ID PRTITLE has not been used in any content
model, inclusion, or as a doctype element.

DTD0096: The generic ID HOWTOUSE has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID BODY has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID SECTINDEX has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID PERSONNEL has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID MATERIALINDEX has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID REFINDEX has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID EQUIPCON has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID ENVIRONMENT has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID APPLICABIL has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID TOOLS has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID SPECIALINST has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID GENSAFINST has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID PARTNAME has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID APPMAC has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID APPINVENT has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID EXPENDINTRO has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID SUBFIG has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID PARAINDEX has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID SECT has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID INSPECTOR has not been used in any content model, inclusion, or as a doctype element.

DTD0096: The generic ID DATE has not been used in any content model, inclusion, or as a doctype element.

DTD does not conform to ISO 8879 standard due to these errors:

Syntax error count: 1

Uncorrectable syntax error count: 1

.DTO file not created due to parsing errors.

Program status code: 5.

Name of CGM under test: i:\94009\c009.cgm
Encoding : Binary

Pictures Examined : All
Elements Examined : All
Bytes Examined : All

BEGIN METAFILE string : >aa3150<
METAFILE DESCRIPTION : >AUTO-TROL/REL-1.0 MIL-D-28003/BASIC-<
>1<

Picture 1 starts at octet offset 136: >aa3150<

Conformance Summary : This file conforms to the CGM specification.
However, this file does not satisfy
the CALS CGM Profile (MIL-D-28003).

Summary of Testing Performed and Errors Found:

1 Pictures Tested
1462 Elements Tested
32234 Octets Tested

| | | |
|--|--------|------|
| 0 Illegal CGM Elements | 1000 - | 1999 |
| 0 Incorrect CGM Element Lengths | 2000 - | 2999 |
| 0 CGM State Errors | 3000 - | 3499 |
| 0 Required CGM Elements Missing or Wrong | 4000 - | 4499 |
| 0 CGM Parameter Values Out of Range | 6000 - | 6499 |
| 0 CGM Structure Errors | 7000 - | 7499 |
| 0 *** CGM Errors Found (total) *** | | |

| | | |
|--|--------|------|
| 0 Profile State Errors | 3500 - | 3999 |
| 0 Illegal Profile Elements | 4500 - | 4999 |
| 1 Profile Parameter Values Out of Range | 6500 - | 6999 |
| 0 Profile Data Limits Exceeded | 8500 - | 8999 |
| 0 Other Profile Constraints Violated | 9500 - | 9999 |
| 1 *** Profile Violations Found (total) *** | | |

1 distinct error(s) and warning(s) reported.
